Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Allowable Subject Matter

The indicated allowability of claim 57 is withdrawn in view of the newly discovered reference(s) to Errico et al. (5,776,135) and Finn et al. (5,474,551).

Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 57 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Errico et al. (5,776,135).

Errico et al. disclose an insert element comprising: an articulating body portion (120, 154) including screw head receiving means (e.g., 130) for receiving a screw head (106) and rod receiving means (162) for receiving a rod (172) therein, said rod receiving means being offset from said screw head receiving means; and locking means (158) for locking a rod within said body portion wherein said locking means is a cam lock including threads (168a, 168b) on an exterior surface of said cam lock for maintaining said cam lock in said body portion. See, e.g., Figs 1, 2, 5 and 6.

Claim 57 is rejected under 35 U.S.C. 102(b) as being anticipated by Finn et al. (5,474,551).

Finn et al. disclose an insert element comprising: an adjustable body portion including screw head receiving means (50) for receiving a screw head (24) and rod receiving means (30) for receiving a rod (12) therein, said rod receiving means being offset from said screw head receiving means; and locking means (80) for locking a rod within said body portion wherein said locking means is a cam lock including threads on an exterior surface of said cam lock for maintaining said cam lock in said body portion (see, e.g., Fig. 4). It is noted that the cam lock including threads on an exterior surface constitutes a camming mechanism since it is capable of converting a rotating motion into a reciprocating motion. See, e.g., "cam." The Columbia Electronic Encyclopedia, Sixth Edition. Columbia University Press., 2003. Answers.com 27 Jun. 2009. <http://www.answers.com/topic/cam>.
